Security Updates- High-Severity Vulnerability in Mozilla Thunderbird

Tracking #:432315692

Date:12-03-2024

TLP: WHITE

EXECUTIVE SUMMARY:

The UAE Cyber Security Council has observed a High-Severity Vulnerability in Mozilla Thunderbird that could be exploited to gain access to sensitive information on affected systems.

TECHNICAL DETAILS:

Vulnerability Details:

- CVE-2024-1936
- Severity-High
- A vulnerability in Mozilla Thunderbird allows the encrypted subject line of an email to be incorrectly assigned to another email within the local cache. This can lead to accidental information disclosure when replying to the affected email.
- An attacker can potentially trick a user into revealing sensitive information through a spoofed subject line in a reply.

Affected Versions:
Mozilla Thunderbird versions before 115.8.1

Fixed Version:
Mozilla Thunderbird 115.8.1

RECOMMENDATIONS:

The UAE Cyber Security Council recommends applying the security updates recently released by Mozilla.

Kindly circulate this information to your subsidiaries and partners as well as share with us any relevant information and findings.

The UAE Cyber Security Council extends its appreciation for the continued collaboration.
