**Vulnerability in SolarWinds Serv-U**  
Tracking #:432315937  
Date:07-06-2024

THE INFORMATION CONTAINED WITHIN IS THE PROPERTY OF THE CYBER SECURITY COUNCIL OF THE UNITED ARAB EMIRATES GOVERNMENT AND IS TO BE USED EXCLUSIVELY FOR INTELLIGENCE PURPOSES. IT MAY NOT BE USED IN ANY LEGAL OR PUBLIC MATTER WITHOUT THE EXPLICIT APPROVAL OF THE CYBER SECURITY COUNCIL

## EXECUTIVE SUMMARY:

The UAE Cyber Security Council has observed a high-severity vulnerability in SolarWinds Serv-U that could be exploited to gain unauthorized access to sensitive files on the system, potentially leading to data breaches or further compromise.

## TECHNICAL DETAILS:

### Vulnerability Details:

- **CVE-2024-28995**
- CVSS Score 8.6 High
- SolarWinds Serv-U contains a directory transversal vulnerability. This vulnerability allows an attacker to bypass security measures and access sensitive files on the underlying host machine's file system.
- An attacker who successfully exploits this vulnerability could gain access to sensitive information such as credentials, configuration files, and other confidential data stored on the server. This could lead to further compromise of the system or lateral movement within the network.

### Affected Versions:

- SolarWinds Serv-U 15.4.2 HF 1 and previous versions

### Fixed Version:

- SolarWinds Serv-U 15.4.2 HF 2

## RECOMMENDATIONS:

The UAE Cyber Security Council recommends updating the affected versions to the fixed or latest versions released by SolarWinds.

Kindly circulate this information to your subsidiaries and partners as well as share with us any relevant information and findings.

The UAE Cyber Security Council extends its appreciation for the continued collaboration.
