EXECUTIVE SUMMARY:

The UAE Cyber Security Council has observed that Drupal has released security updates to address a critical vulnerability in the Monster Menus module.

TECHNICAL DETAILS:

Vulnerability Details:

- **SA-CONTRIB-2024-052**
- **Severity:** Critical
- A critical vulnerability exists in the Monster Menus module, which is used to manage nodes within pages with a detailed permissions structure. This vulnerability can lead to arbitrary PHP code execution due to insufficient data sanitization before using PHP's unserialize() function.
- The vulnerability arises when user-supplied input is not properly sanitized before being passed to the unserialize() function in PHP. This can allow attackers to inject arbitrary PHP objects into the application scope, potentially leading to code execution, SQL injection, or other malicious activities

Affected Versions:

- Versions <9.3.4
- Versions >=9.4.0 and <9.4.2

Fixed Versions:

- Monster Menus branch 9.4.x: Upgrade to version 9.4.2
- Monster Menus branch 9.3.x: Upgrade to version 9.3.4

RECOMMENDATIONS:

The UAE Cyber Security Council recommends upgrading the affected versions to the fixed versions at the earliest.

Kindly circulate this information to your subsidiaries and partners as well as share with us any relevant information and findings.

The UAE Cyber Security Council extends its appreciation for the continued collaboration.
