## EXECUTIVE SUMMARY:

The UAE Cyber Security Council has observed a high-severity vulnerability in Hikvision Wireless Access Points that could be exploited to execute malicious commands on affected devices.

## TECHNICAL DETAILS:

### Vulnerability Details:

- **CVE-2025-39240**
- CVSS v3.1 score: 7.2 High
- A security vulnerability exists in some Hikvision Wireless Access Point (WAP) models. The flaw arises from insufficient input validation, which allows authenticated attackers to execute arbitrary system commands by sending specially crafted packets to the vulnerable devices.
- Successful exploitation of this vulnerability requires valid credentials and can lead to remote code execution, compromising confidentiality, integrity, and availability of the device.
