High-Severity Vulnerabilities in ManageEngine Exchange Reporter Plus
Tracking #:432317889
Date:31-10-2025

مجلس الأمن السيبراني
CYBER SECURITY COUNCIL

EXECUTIVE SUMMARY:

The UAE Cyber Security Council has observed high-severity vulnerabilities in ManageEngine Exchange Reporter Plus that could allow attackers to inject and execute malicious scripts, potentially leading to unauthorized access and compromise of the application.

TECHNICAL DETAILS:

Vulnerability Details
CVE-2025-5343 – Stored XSS in Instant Search (Content Search module)
- **Severity:** High
- A stored XSS vulnerability exists in the Instant Search function within the Content Search module. Attackers could exploit this flaw to inject malicious scripts, potentially compromising user sessions.
- Successful exploitation could allow attackers to execute arbitrary JavaScript in the context of the affected user's session, gaining access to the application.
- **Affected Versions:** Build 5721 and below

CVE-2025-5347 – Stored XSS in Messages by Body Keyword Report (Reports module)
- **Severity:** High
- A stored XSS vulnerability exists in the "Messages by Body Keyword" report within the Reports module. This issue could be exploited by malicious users to execute unauthorized scripts.
- Successful exploitation could allow attackers to execute arbitrary code, leading to unauthorized access to application data.
- **Affected Versions:** Build 5722 and below

Fixed Versions:
- Build 5723 or later

RECOMMENDATIONS:

The UAE Cyber Security Council recommends updating the affected versions to the fixed or latest versions released by ManageEngine.

Kindly circulate this information to your subsidiaries and partners as well as share with us any relevant information and findings.

The UAE Cyber Security Council extends its appreciation for the continued collaboration.
